-  Knowledgeable locals to assist in getting the best result for your requirements and budget
-  Locally owned and operated with the best after sales service

SYSTEM DESIGN AND ENGINEERING PROCESS IS AS FOLLOWS

1. Proposal and Concept Design:

Jessups Solar Squad has been delivering quality solar designs and installations for over 20 years. We use this experience to analyse your specific situation to design the optimum solar system for you. Your formal proposal includes full system specifications, proposed site plan, 20-year financial analysis (including financial returns and payback period), environmental analysis, and a detailed quote.

2. Consultation and detailed Design:

In consultation with you, we design the full solution, along with detailed system specifications to suit your requirements and budget. We manage all required paperwork including lodging electrical utilities applications, rebate applications and coordinating building and/or council permits as applicable. At this stage we can also facilitate finance options and payment schedules to suit your needs.

3. Installation:

Jessups Solar Squad's CEC certified qualified electricians carry out all installations. Our team are experienced and skilled tradespeople that have proven to be reliable over many years of working with Jessups. We fully guarantee all workmanship.

4. Test and Measure:

All our systems have the latest in connectivity, giving you access to your system via an application on your device. This allows you to retrieve up to date comprehensive performance information on your solar usage and gains. Jessups Solar Squad provide full after sales service and support.

We look forward to working with you to meet your renewable energy expectations
